

Website UI Redesign

Crimson Cup Bangladesh (crimsoncupbangladesh.com)

This project redesigns the user interface of Crimson Cup Bangladesh's website to improve usability, following a heuristic evaluation, a mood board and style guide, and high-fidelity mockups for desktop and mobile.

1. Heuristic Evaluation

The existing site was evaluated against Jakob Nielsen's usability heuristics, based on direct inspection of the live site's homepage, navigation, and content structure.

Heuristic	Observed issue
1. Visibility of system status	The site has cart and account features (Shopify) but no visible link to "Order Online" from the main navigation, leaving users unsure whether online ordering is actually available.
2. Match between system and real world	The Menu page and Location page are presented as static content pages rather than an ordering flow, despite the underlying platform (Shopify) being commerce-capable — the site behaves like a brochure, not a store.
3. Consistency and standards	The main navigation (Home, Menu, Location, History, Blog, Career) does not match the footer's "Quick Links", which adds Contact but omits others — inconsistent link sets confuse wayfinding.

4. Error prevention	Several award badge images link to placeholder anchors ("◇") instead of real destinations — dead links that go nowhere when clicked.
5. Aesthetic and minimalist design	The brand-story paragraph ("What started as a dream in Columbus, Ohio...") is repeated nearly verbatim three times across the homepage (About Us, Innovation, and Ohio to Bangladesh sections), adding redundant scroll length without new information.
6. Recognition rather than recall	Award badges (Golden Bean, Good Food Awards, Roast Magazine) are shown as logos with no caption explaining what each award means, forcing users to already know the context.
7. Flexibility and efficiency of use	There is no quick path to "Order now" or "Find nearest location" from the hero section — only "See Menu" and "Location" as separate steps.
8. Visibility of primary action	The homepage has no single, prominent call-to-action; "See Menu" and "Location" compete equally, and there's no visual weight guiding a first-time visitor toward the most useful next step.

2. Mood Board — Direction Selection

The redesign direction keeps the "Crimson" brand identity but rebalances it around a warm, coffeehouse-appropriate palette rather than a generic corporate template:

- **Warm and inviting—crimson** red paired with cream and coffee-brown, evoking the physical cafe experience (selected direction)
- **Minimal and modern** — muted neutrals with a single crimson accent, more restrained and product-photography-led
- **Bold and youthful** — higher-contrast crimson and gold, aimed at a younger Dhaka audience

The "Warm and inviting" direction was selected, as it best supports the brand's "Coffee & Community" positioning while giving the interface clearer visual hierarchy than the current template.

3. Style Guide

3.1 Color Palette

Name	Hex	Usage
Crimson 600	#9E2A2B	Primary brand color / headers / primary CTA
Cream 50	#F6EFE4	Page background — warm, coffeehouse feel
Coffee Brown 700	#4A3222	Body text / footer
Gold 500	#B8863B	Accents / award & rewards highlights
Green 600	#5B7F3B	Success states / order confirmed

3.2 Typography Scale

- Page title: 30px, medium weight serif for warmth (e.g. Playfair Display or similar)
- Section heading: 20px, medium weight
- Body text: 16px, regular, sans-serif for readability
- Caption / metadata: 13px, regular

3.3 Spacing and Shape

- Base spacing unit: 8px
- Card corner radius: 10px — soft, welcoming shapes
- Single hero image or video per section instead of stacked repeated blocks

This directly resolves the "aesthetic and minimalist design" finding: the redundant brand-story text is consolidated into a single, well-placed narrative section instead of three near-duplicate passages.

4. High-Fidelity Mockups

The redesign focuses on the homepage and navigation structure, since this is where the heuristic evaluation identified the most impactful usability issues.

4.1 Homepage

- Single, clear hero section with one primary call-to-action ("Order Online") rather than two competing links ("Order Online" given visual priority over "Find a Location")
- Brand story consolidated into one section instead of three repeated passages, cutting scroll length significantly
- Award badges shown with short captions explaining what each award is, rather than unexplained logos
- All badge and award links point to real destinations — no placeholder or dead links

4.2 Navigation

- Top navigation and footer "Quick Links" unified into a single consistent set: Home, Order Online, Menu, Location, Rewards, History, Career, Contact
- "Order Online" added as a primary nav item, connecting directly to the cart/account features already present on the platform

5. Responsive Design Notes

- Desktop layout designed at 1440px width; mobile at 375px width
- Hero CTA and navigation collapse into a sticky mobile header with "Order Online" always visible
- Award badge row switches from a horizontal strip to a horizontally scrollable carousel on mobile to avoid cramped logos

6. Outcome

This project applied visual hierarchy (through a single dominant call-to-action and consolidated brand narrative), layout design (through unified navigation and captioned award content), and responsive design (through the desktop/mobile breakpoint system), directly addressing the usability issues identified in the heuristic evaluation of the original site.
